

OBO-3022 Digital Microphone PDM Decode Module

Introduction :

OBO-3022 is designed for MEMS digital microphone decoding. It can provide power and clock for digital and decode digital microphone data. Transfer digital signal to analog signal. In order to measure the microphone sound signal. It can use to OBO-1014 analyzer or other acoustic analyzer.

Features:

- Support 4 channels digital microphone, 2 data path L/R channel(switching)
- Provide 1.5v~4.5V power for digital microphone
- Provide 2.4M Hz clock for digital microphone
- 2 channels analog signal switching
